interaction of the microwave fields with the brain and central nervous system as measured by neurological or behavior effects. Many studies have been made on the biological effects of microwave radiation. The effects are usually designated as thermal or nonthermal in nature depending upon the mechanism of the interaction.

biological effects of EMR. To lay groundwork for understanding, we focus on well-established nonthermal biological effects of microwaves, explaining how a thermal interaction might occur; then, we criticize the spread of heat (not light) which has replaced good physics in guiding research in this area.

Between the early 1940s and 1900, research on the biological effects of microwave radiation slowly shifted from its medical context and the search for benefits to a military-industrial context and the search for hazards.

Thermal effects are those interactions which are caused by the heating of the biological specimen and can be duplicated using conventional heating techniques. Nonthermal or specific effects are due to the direct interaction of the electromagnetic field of the incoming microwave radiation and the biological specimen.
