The author is in charge of what I believe is the largest laser laboratory in which the biomedical aspects of laser in clinical medicine are being studied. He, in cooperation with his associates, has summarized to some extent their total achievement, as well as the achievement of laser investigators in the area of biology and medicine.

Dale a century ago, histamine has become one of the most important multifunctional biogenic amines in the field of biomedicine. The pharmacological effects of histamine are mediated through four types of membrane histamine receptors; H1R, H2R, H3R and H4R, which are all heptahelical G-protein-coupled receptors.

However, except for a few exceptions in the biomedical and microwelding fields, it remains a laboratory tool for scientific research. It is to medicine that most research workers in laser technology look for immediate practical developments, although up to the present there has not been much investigation of lasers in the field of medicine.
