A study was conducted in Carey Island, Peninsular Malaysia to determine species composition and feeding guilds of birds that utilized Palm Oil Mill Effluent (POME) ponds. The presence of birds in the area was recorded by a direct observation technique (using binoculars and video camera) and from ...

Species composition and feeding guilds of birds - CORE

Scrub-Jay, which is confined today to Santa Cruz Island, is the most distinct and only endemic species of bird found on the Channel Islands. Of the island endemics found on the park islands, two populations on Santa Barbara Island (San Clemente House Finch and Santa Barbara Island Song Sparrow) have been extirpated during the past century.
