1.1. Localized structures and functions In early work in neurolinguistics researchers studied people with brain lesions and discovered relationships between the patient's specific language deficit and the location of the lesion.

Brain Mapping of Language Processing Using Functional MRI

Abstract. We examined the brain organization for language and auditory functions in five high-functioning autistic and five normal adults, using [15 O]-water positron emission tomography (PET). Cerebral blood flow was studied for rest, listening to tones, and listening to, repeating, and generating sentences.

Brain Mapping of Language and Auditory Perception in High

Researchers mapped different language impairments to specific brain regions to reveal the basic organization of our language system. The findings shed light on language processing and may lead to improved diagnosis and treatment of language impairments. Through language which includes sounds ...
