Specification: MIFAB WHS Series (specify size) Type 316L stainless steel bellows type water hammer arrestor enclosed by an outer Type 304 stainless steel body. The bellows shall be of multiple type diaphragms, and heli-arc welded at the inner and outer peripheries. The bellows shall be exposed internally to the line pressure and all material in contact with the line fluid shall be stainless steel.

The electronic "hydraulic analogy" (derisively referred to as the drain-pipe theory by Oliver Lodge) is the most widely used analogy for "electron fluid" in a metal conductor. Since electric current is invisible and the processes at play in electronics are often difficult to demonstrate, the various electronic components are represented by hydraulic equivalents.

### **Hydraulic analogy - Wikipedia**

A hydraulic ram, or hydram, is a cyclic water pump powered by hydropower. It takes in water at one "hydraulic head" (pressure) and flow rate, and outputs water at a higher hydraulic head and lower flow rate. The device uses the water hammer effect to develop pressure that allows a portion of the input water that powers the pump to be lifted to a point higher than where the water originally started.

The Hydraulic Ram Pump, Hydram, or simply a Ram Pump is a pump that uses the water hammer effect from built up water pressure. Using this pressure that has been created by a water source above the pump, it is able to lift water to an elevation higher than the pump.

1.1 This specification covers packaged dry, hydraulic cement grout (nonshrink) intended for use under applied load (such as to support a structure, a machine, and the like) where a change in height below initial placement height is to be avoided.

## **Standard Specification for Packaged Dry, Hydraulic-Cement**

The rhythmic raising and dropping of the bit loosens up sand or clay and breaks up rock into "cuttings" and mixes them with water added by the driller to form a slurry.

Accumulator: used in domestic water applications to stabilize the pressure in the system and avoid the pump cycling on and off every time a tap is opened somewhere in the house. The flexible bladder is pressurized with air at the pressure desired for achieving the correct flow rate at the furthest point of the house or system.
